Amendments to the Claims

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

- (Previously presented) A method of providing a surface of a material with an image, the
 method comprising applying to the surface an image sheet comprised of
 - (i) a flexible layer of a Shape Memory Polymer, and
- (ii) an image bonded to said layer by means of an image key coat,
 and bonding said image sheet to the surface by means of an adhesive and a process which

involves heating of the Shape Memory Polymer to a temperature above its Glass Transition
Temperature.

- 2. (Original) A method as claimed in claim 1 wherein the material is flexible.
- (Previously presented) A method as claimed in claim 1 wherein the material is leather, a
 textile material or a synthetic plastics material.
- 4. (Original) A method as claimed in claim 3 wherein the material is leather.
- 5. (Previously presented) A method as claimed in claim 1 wherein the Shape Memory Polymer has a T_g value of 25-45°C.
- (Previously presented) A method as claimed in claim 1 wherein the Shape Memory Polymer layer has a thickness of 20 to 60 microns.
- (Previously presented) A method as claimed in claim 1 wherein the image key coat comprises an adhesive or an adhesion promoter.

REPLY UNDER 37 CFR 1.116 EXPEDITED PROCEDURE TECHNOLOGY CENTER 2853

- (Original) A method as claimed in claim 7 wherein an ink receptive layer is provided between the image and the layer of the adhesive or adhesion promoter providing the image key coat.
- 9. (Previously presented) A method as claimed in claim 1 wherein the adhesive for bonding the image sheet to the material is a heat activated adhesive which is activated at a temperature 2-3° lower than the Glass Transition Temperature of the Shape Memory Polymer layer.
